

Special service transformers & power supply protection

*Latest technology, experienced service staff
and local partners across Germany*

We ensure that your wind and solar plants can feed energy smoothly into the public grid and take on facility responsibility for the electrical systems. We communicate with grid operators and implement EEG amendments – as requested by customers.

We provide complete servicing and maintenance and repeat testing for transformers and transmission stations. It goes without saying that our transformer service covers the requirements as legally prescribed under DGUV-V3. Our service specialists are authorised for 30kV switching.

Our technical services at a glance:

- Inspecting grid protection relays
- Maintenance
 - Checking the switchboard rooms
 - Cleaning the entire station
 - Re-lubricating mechanical parts
 - Checking the insulating oil
- Repair and replacement of faulty components
- Thermography
- Spare parts service
 - Database-based spare parts strategy with own warehouse
- Planning and retrofitting of the protective system
- Documentation
