

Gear unit videoscopy

Looking inside requires skills

Videoscopy gives an insight about the condition of the gear. It is an important part of condition-based maintenance.

One of our objectives is to detect gear damages before downtimes are caused. We specially carry out visual inspections of gear components like bearings and gear teeth which are not visible from outside.

Our teams of experts comprising several members can be quickly deployed since we have experienced staff for videoscopy all over Europe.

Our services at a glance:

- Using the approved technology: Everest XLG3
- Visual inspection of gear components which are not visible from outside
- Sending the images to third parties in real-time
- Documentation
