

Repowering

Commercially & technically planned in a professional manner, safely implemented

We set up new and more powerful turbines at existing sites and dismantle the old turbines in a way which allows them to be put up at another place where you can continue to use them. If desired, we also undertake the set up work at the new site. We sell the old turbines and manage the entire sales process.

We are present everywhere in Europe with our services for repowering sites.

Our technical services at a glance:

- Consultation and planning for modernising the wind park
- Value-preserving dismantling
- Removing foundations, transformer stations/substations, cables, sections, access roads
- Transporting to the new site/temporary storage
- Overhauling individual components or the complete turbine
- Re-construction of the old turbine at the new site

Our commercial services at a glance:

- Financial consultation and business planning
- Selling the old turbines
