psm: Dismantling old wind turbines with well-trained personnel, certified equipment and extensive safety measures

Erkelenz, 16.04.2013

Anyone looking for a service provider for expert dismantling of old wind turbines, will find psm Nature Power Service & Management GmbH & Co. KG to be an experienced supplier with specific know-how and high safety standards. psm has previously dismantled around 40 turbines with an output of 60 kW to 1.8 mW, including some unusual designs.

Operators get a complete service package from psm, enabling them to clear a site and convert it to new usage as quickly as possible: from project planning, value-preserving dismantling, secure loading, transport with all associated approval processes, renaturation of the foundations for the access routes, the transformers and the transfer stations, to reconstruction at the new site.

Marketing is an additional service that psm can provide. The firm uses its extensive network to bring suppliers and buyers together and to negotiate fair purchase prices. If reconstruction of the turbine is no longer viable, the firm can also handle clean disposal of the old material.

“Dismantling old wind turbines is a job for the professionals, as otherwise the safety risks are much too high and there is no guarantee of the value of the turbines being preserved. Just looking for the cheapest quote doesn't pay off in the end”, says Silvio Matysik, Head of the “Large Components” division at psm.

If you are interested you can request a form for the technical and commercial details from psm and state your desired date for dismantling. psm provides its services for a fixed price.

psm services for dismantling old wind turbines since 2009:

- Project planning
- Professional, value-preserving dismantling
- Secure loading
- Complete logistics for transport to the new site
- Value-oriented marketing
- Disposal/recycling of individual components if nec.
- Renaturation of transformers and transfer stations
- Renaturation of foundations, crane hardstandings, access roads
- Highest safety standards
- Certified lifting gear
- Fixed price

Background Information

psm Nature Power Service & Management GmbH & Co. KG is one of the largest manufacturer-independent service companies for wind turbines and solar energy systems in Germany. It provides maintenance and service along with technical and commercial management.

psm was founded in 1998 and has continually evolved during this time. With 100 members of staff at its headquarters in Erkelenz and service locations spread throughout Germany, it currently looks after 200 customers, 500 wind turbines and solar systems and 4,000 investors with its technical, business and organisational expertise.
